About This Game

Uncrewed is a real-time strategy game for the PC with the ability to design units from scratch. Unlike in more traditional RTS, units obey the laws of physics, making design choices especially important.

The story takes place sometime in the future when sentient machines are seemingly all that is left of intelligent life. In a search for an elusive piece of software, authored by their mysterious and powerful creator, the machines have banded into warring factions. They predict that the code will not only provide the answer for the meaning of their existence, but also give the ultimate power to the first one to execute it.

Features

- Design your own units from scratch.
- A variety of land, water and air propulsion methods: wheels, treads, walker legs, jet engines, fans.
- Bend, twist, taper, scale available parts (plates, frames, tubes etc.) to further diversify your unit aesthetics and functionality.
- Apply decals to units.
- Multiple weapon classes with distinct weaknesses and strengths.
- Physics: Unit design affects its performance on the battlefield, as it obeys the laws of physics (e.g. massive units are slower and require more energy; a high center of gravity makes the unit unstable).
- Assembly Factory: Control and optimize the unit assembly process itself (e.g. the way the unit is built determines its construction time).
- Single Player Campaign.
- Online Multiplayer: Matchmaking, Private Games, LAN.
- Steam Workshop support.

I'm returning this game.

Sure you can build stuff, but the model only matters for Center of Mass and hitpoints.

It's got a good modeling engine, so if you wanted to recreate units from another RTS game, maybe it's good. But the mechanics aren't anything to write home about.

All of the interesting stuff you get via the campaign somehow, but it doesn't incentive any playstyles with tradeoffs, just upgrades as far as I can tell.

The UI is also lacking.

It's an interesting concept, but not fun to play.
